

## SCIENCE

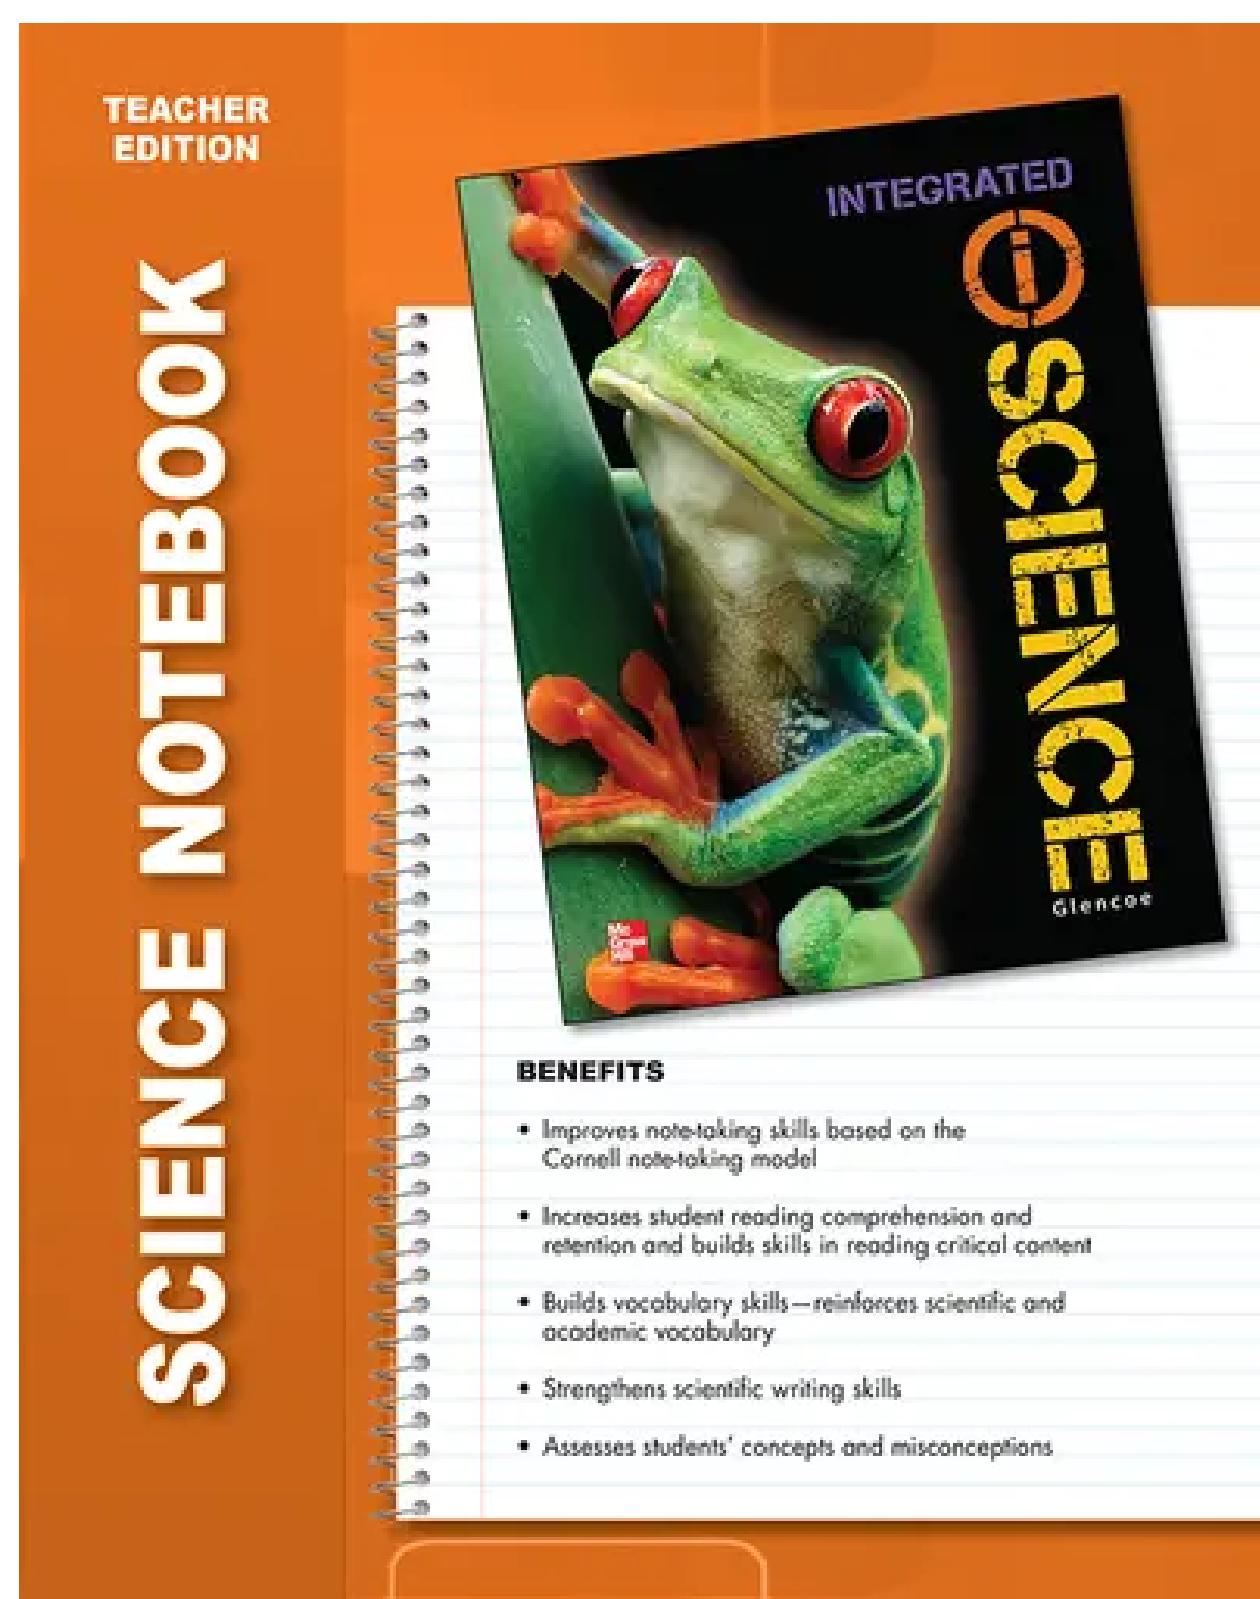

**A structured, standards-aligned middle school science program with strong support tools.**

A structured, school-style science program for grades 6–8. Families who like clear lessons, visuals, and strong standards alignment tend to appreciate this one. Each chapter breaks concepts down with readings, diagrams, videos, and labs that walk students through the “why” behind the science.

### Curriculum Overview:

- Life, Earth & Space, and Physical Science
- 33–37 weeks, about 1 hr twice a week
- Text-to-speech, videos, quizzes, and digital supports
- Labs, skill practices, and foldables built in
- Print + online options

Parents often say the structure makes middle school science feel doable. Everything is laid out—the key concepts, vocabulary, labs, and online tools—so it's easy to stay consistent. The mix of visuals, readings, and hands-on activities helps kids understand tougher ideas and stay engaged, especially with the digital supports.

Just keep in mind that it's a bit text-heavy and usually needs parent involvement. Most students still need help with readings and labs, so this may not be the best fit for families wanting a lighter or mostly independent science option.
