

MATH

A hands-on, mastery-based math program that meets students where they are.

If your child learns best by seeing and touching math, Math-U-See is worth a look. It's a hands-on program that uses manipulatives to help students really understand what's happening in a problem, not just follow steps.

Lessons are short — usually under 30 minutes — and focus on one concept at a time. Students don't move on until they've mastered it, but there's also built-in review so skills don't fade. The videos are simple and parent-friendly, so you can preview the lesson first or watch together.

It covers everything from Primer through Calculus, so you can stick with it for years if it works well for your family. We'll help you figure out the right starting point with the placement test and make sure you have the materials you need.

Quick Highlights:

- Great for visual and hands-on learners
- One concept at a time = less overwhelm
- Includes regular review to keep skills fresh
- Parent videos explain the "why" behind the math
- Levels from early elementary through high school
- Placement test available online
